Professional Summary

B.E. graduate in Artificial Intelligence and Machine Learning with a strong foundation in Python, SQL, Machine Learning, Data Science, and backend development. Hands-on experience building machine learning models and analyzing data. Familiar with Generative AI, LLM-based applications, OOP, Data Structures and Algorithms, and SQL databases. Looking for an entry-level role where I can apply my programming and AI/ML skills to build practical software solutions and grow as an engineer..

Technical Skills

Programming Tools and Web technologies: Python, SQL, Git, Docker, HTML, CSS
Computer Science Fundamentals: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)
Data Science: Statistical Analysis, Data Cleaning, Exploratory Data Analysis, Data Visualization
Libraries and Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Flask, FastAPI, Streamlit
AI and Machine Learning: Machine Learning, Generative AI basics

Projects

Speech Driven NLU Data Analytics Chatbot | [GitHub](#) | [Demo](#)

- Developed a multilingual voice-enabled web application that allows users to upload CSV datasets and perform data analysis through natural language queries, making data exploration accessible to nontechnical users.
- Built a Flask-based backend that uses an LLM and dataset context to translate natural language queries into executable Pandas expressions, generate speech-based responses and stores interaction logs using SQLite and SQLAlchemy.

Secure Vault: Cryptographic Credential Management System | [GitHub](#) | [Demo](#)

- Developed a secure credential management application featuring a custom-themed Streamlit interface that allows users to generate, store, and manage account credentials through an encrypted and easy-to-use experience.
- Built and tested a FastAPI backend for authentication and credential management, implemented AES-128 encryption to secure sensitive data, and used MySQL for data storage and persistence.

Loan Risk Predictor with AI Explanations | [GitHub](#) | [Demo](#)

- Developed an interactive Streamlit web application that predicts loan approvals based on applicant financial data and provides clear, policy-backed explanations for every decision.
- Built and evaluated an XGBoost model for credit risk prediction, used SHAP waterfall plots to visualize key decision factors for loan officers, and implemented a RAG pipeline using LangChain, ChromaDB, and Gemini API to reference bank policies in real time.

Experience

Python with Data Science Intern– PySpiders Feb 2026– May 2026

- Cleaned and prepared datasets, conducted Exploratory Data Analysis (EDA), created visualizations, and identified meaningful patterns and insights.
- Built machine learning projects as part of hands-on training, applying multiple techniques, including classification, regression, and LLMs

Certifications

- Python Full Course (Beginner to Advanced) – GeeksforGeeks
- SQL – HackerRank

Education

B.E in Artificial Intelligence and Machine Learning
The Oxford College of Engineering | 2026 CGPA: 8.1/10
